

Most Secure System

Stan explains
to Phillip how
to completely
secure a
system...

These are mine, they
are the *most* secure
systems in the world!

How did you manage that?

Do you have a team of security experts
continuously monitoring the *Intrusion
Detection and Intrusion
Prevention Systems*?

Nope.

Do you have firewalls at every
entry point into the system
monitored by dedicated
firewall administrators?

And
Nope.

Do you use advanced
management tools to keep
the system software up-to-
date and patch all vulner-
abilities?

Nope,
that's not
necessary.

Well, for starters, the systems
are locked inside this ultra-strong
steel cage and I threw away the
key...

Hey, how come it
looks like all the
devices are off...?

...and all the computers are
turned off. The only way to be
completely secure is to turn off all
the computers – no one can hack
the system now!
